

Proxy Hardening — Test-Type Coverage Status

Revision: 4 **Last modified:** 2026-07-01T15:34:00Z **Status:** In progress — 10 test types PASS with captured live evidence (unit [control-plane, all pkgs pass], stress+chaos, DDoS, concurrency/atomicity, memory-soak, **P10 VPN fail-closed full-automation GREEN**, race/deadlock [0 DATA RACE], benchmarking/performance [data-plane p50=86ms + control-plane Go micro-benchmarks], Challenges [2 PASS / 1 honest SKIP], security ACL live-deny GREEN [authoritative Squid access.log TCP_DENIED/403 + HIER_NONE — deny enforced + no upstream leak; S3 Via + S4 SOCKS-SSRF also PASS, wired into the standing suite §11.4.135]), 1 honest SKIP (HelixQA — bank blocked on 6 un-vendored siblings), integration + e2e PENDING (broader tests/run-tests.sh suite). The control-plane store-layer audit-atomicity TOCTOU was investigated this round and found already CLOSED (store.WithTx), verified RED→GREEN. No PASS is claimed without a real qa-results/ evidence path (§11.4.6). **Authority:** Inherits constitution/Constitution.md per §11.4.35. §11.4.45 integration-status doc reconciling the §11.4.169 test-type-coverage matrix for the proxy hardening workstream. **Companion:** summary [Status_Summary.md](#)

Operator-blocked / pending items (read first — §11.4.45 O(1) surface)

Item	Why blocked / pending	Unblock condition
P10 real-VPN egress-half (SKIP)	The egress half — proving traffic actually EXITS via the tunnel — needs operator gluetun WireGuard credentials (§11.4.21). The fail-closed half is now GREEN.	Operator provides gluetun WireGuard creds; then the real-egress positive path can be captured.

§11.4.169 test-type-coverage matrix (captured-evidence-driven — §11.4.5/ §11.4.69)

Base proxy stack UP on :53128 at capture time. Every PASS below cites a real, non-empty qa-results/ artefact captured live this session.

Test type	Status	Evidence path	Notes
Unit	PASS	qa-results/unit/control-plane_unit_20260701T131306Z.log	go tes plane: 100%, 81.2% 64.5% only).

Honest boundary (§11.4.6)

This matrix reconciles the **hardening** test-type picture proven in this session. Ten types (unit, stress+chaos, DDoS, concurrency/atomicity, memory, P10 fail-closed full-automation, race/deadlock, benchmarking, Challenges, security ACL live-deny) are PASS with captured live qa-results/ evidence. The security-ACL row moved SKIP→PASS this round: the 000 client-code ambiguity that previously forced the SKIP was replaced by reading Squid's own access.log (TCP_DENIED/403 + HIER_NONE), the authoritative sink-side oracle (§11.4.69), with a RED teeth-check (allowed :443 → TCP_TUNNEL/HIER_DIRECT → no false deny-PASS, §11.4.115) and the guard wired into the standing suite (§11.4.135). One SKIP is honest (§11.4.3): HelixQA (bank blocked on 6 un-vendored own-org siblings — the runner + proxy.yaml bank exist; unblock = vendor them or pass HELIXQA_BIN). Integration + e2e remain PENDING — not claims the capability is broken; covered by the broader tests/run-tests.sh suite. The two follow-ups flagged earlier this round are RESOLVED: the store-layer audit-atomicity TOCTOU was found already CLOSED (store.WithTx, verified RED→GREEN), and the control-plane Go-benchmark gap is closed (3 new *_bench_test.go). None of this substitutes for the §11.4.40 full-suite retest before a release tag.
